

## Manufacturing CNP Brands

### The situation

---

CNP Brands is one of the leading manufacturers, importers and distributors of a broad range of nursery products. With a large factory in Derrimut, VIC and long operating hours, more than 60% of CNP Brands' energy usage could be attributed to lighting.

In addition to cutting their energy bills, CNP Brands were interested in improving the lux levels and working environment of their warehouse and the ambience in their office and showroom areas.

### The solution

---

A combination of lights from the littil VIVA, ARGO, and FORTIS ranges were installed and led to an enormous reduction in energy expenditure of 75%! As their new littil LED lights will last for more than 50,000 hours, CNP Brands is saving an additional \$4,168 in the maintenance costs of replacing lights and a grand total of over \$31,000 every year. These fantastic savings will enable CNP Brands to pay back the total cost of the project in just 1.5 years.

The new littil LED lights have significantly improved the working and OH&S conditions in the warehouse spaces and in addition, the high lumen output of the lights is now providing optimum conditions for product exhibition.

Over the next 10 years, CNP Brands will enjoy total savings of over \$300,000.
