

Industrial Australian Fluid Handling

The situation

Australian Fluid Handling (AFH) is one of Australia's leading providers of customised and engineered compressors, pumps and skid packaged equipment. With a wide range of industrial machinery, large warehouse space and long operating hours, AFH were well positioned to save by upgrading to LED lighting.

The solution

Over 140 littil LED lights were installed; a combination of VIVA troffers, FORTIS tubes, OPTIMA downlights, ARGO corn lights and OSTRO oyster lights. These products are set to reduce Australian Fluid Handling's lighting energy usage by 63% and, due to their lifespan of over 50,000 hrs will reduce the maintenance costs of replacing lights by \$700 per annum. In collaboration with the Hobsons Bay City Council's Light\$mart program, AFH were able to access a local council rebate and by installing Victorian Energy Efficiency Scheme approved littil LED products, AFH received an additional rebate of 30% off the initial install price.

After the installation, Dietmar Hildebrand, CEO reported receiving an excellent service, completed to perfection.
